SUMMARY

Detail-oriented and analytically driven data science student with hands-on experience in data cleaning, exploratory data analysis, statistical modeling, and data visualization. Proficient in Python, SQL, and Excel with a strong foundation in machine learning, ETL pipelines, and dashboard creation. Passionate about transforming raw data into actionable insights and building end-to-end data solutions. Eager to apply analytical skills and technical expertise to solve real-world business problems in a collaborative, fast-paced environment.

TECHNICAL SKILLS

Programming Languages:	Python, SQL, JavaScript, HTML/CSS
Data Analysis & ML:	Pandas, NumPy, Scikit-learn, SciPy, Statsmodels, Matplotlib, Seaborn
Databases:	MySQL, PostgreSQL, MongoDB
Visualization Tools:	Excel, Tableau, Matplotlib, Seaborn
Tools & Platforms:	Git, GitHub, Jupyter Notebook, VS Code, Google Colab
Other:	ETL Pipelines, Data Cleaning, Statistical Analysis, EDA, Feature Engineering

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science and AI

2024 – 2028

Rishihood University, Sonipat, Haryana

CGPA: 7.0 / 10.0

PROJECTS

F1 Sponsorship and Investment ROI Analytics Dashboard.

[GitHub](#) ↗

Tableau, Python, Pandas, SQL, Excel, ETL Pipeline

- Analyzed 2014–2024 Formula 1 constructor performance data using the Ergast historical dataset to identify which team offers the best sponsorship return by evaluating growth, consistency, reliability, risk, and operational excellence together.
- Built a complete Python ETL pipeline by extracting 14+ CSV files, cleaning and transforming 4,626+ race-level records, engineering key features, and preparing dashboard-ready datasets for reliable sponsor decision-making and investment analysis.
- Developed three industry-level Tableau dashboards with advanced drill-downs, KPI scorecards, investment ranking models, and portfolio strategy views to help sponsors compare premium teams, undervalued teams, and diversified sponsorship opportunities.
- Discovered McLaren as the strongest current sponsorship opportunity, identified Red Bull as a high-profile but riskier premium option, and revealed Sauber, Aston Martin, Haas, and Williams as strong value picks for budget-conscious and diversified sponsor portfolios.

F1 Race Strategy Intelligence

[GitHub](#) ↗

Python, Pandas, Tableau, Hypothesis Testing, ETL Pipeline

- Analyzed how strategic execution — qualifying precision, pit stop efficiency, and circuit tactics — drives Constructor Championship outcomes.
- Built a 5-notebook ETL pipeline processing 726,600+ records across 76 F1 seasons and 111 attributes from the Ergast dataset.
- Engineered Grid-to-Finish Excellence Delta and Operational Efficiency Score KPIs; applied hypothesis testing to quantify pit strategy value.
- Built Tableau dashboards comparing 1-stop vs 2-stop strategies across circuit types and led a 7-member cross-functional team.

Hindalco vs NALCO — Financial Ratio Analysis

[GitHub](#) ↗

Excel, Tableau, Financial Modeling, Ratio Analysis

- Compared Hindalco Industries and National Aluminium Company across FY22–FY25 using 16+ key financial ratios including liquidity, profitability, efficiency, and valuation metrics.
- Built detailed Excel dashboards with consolidated income statements, balance sheets, and common-size financial statements.
- Derived investment recommendations based on NALCO's superior profitability (ROE 29.5% vs 13%) and Hindalco's stronger asset efficiency, visualized with Tableau.
